

## How-to use OCR with the PEARL Camera

Open OpenBook software

Connect the PEARL camera to the laptop via USB

Line up the document that you would like to OCR under the camera

- To help line the page up properly, switch the View to “Camera view”

Click Acquire (in the ribbon) → Acquire a Page

- It may take a minute for the page to be acquired

You can now change your view to “Text view” to read the acquired document (or have the document read to you)
